ABLE ASSESS · FOR HOME CARE

Turn fall-risk conversations into new clients.

Able Assess gives home care agencies a tangible, science-backed way to demonstrate value from the very first conversation — helping you win more clients, keep them longer, and stand out in a crowded marketplace.

THE CHALLENGE

The conversion challenge in home care.

Families choosing a home care provider rarely see a meaningful difference between agencies. Caregivers look similar on paper, pricing is comparable, and trust is built on intangibles. That makes conversion a coin-flip — and makes retention fragile. Agencies that differentiate with clinical-grade insight break out of the commodity trap. Able Assess is the physical, measurable, easy-to-demo tool that makes your value impossible to ignore.

$100K+

PER LOST 24/7 CLIENT

Estimated gross profit impact of a single churn.

< 5 min

PER ASSESSMENT

In any care setting, with four validated metrics.

4 metrics

GRIP · SIT-TO-STAND · GAIT · BALANCE

Clinical-grade, objective, repeatable.

HOW ABLE ASSESS DRIVES CONVERSION

Four moments where the device earns its keep.

01

Open the door

A hands-on demo at senior living events, assessments, and expos becomes an instant conversation starter. Prospects engage physically, not just verbally.

02

Prove your value

Establish a grip-strength baseline on the first visit. Families see a number, not a sales pitch, and instantly understand why ongoing care matters.

03

Differentiate your brand

Position your agency as tech-forward and clinically informed, without stepping outside a non-medical scope. Few competitors can match this story.

04

Retain and expand

Periodic re-measurement surfaces decline early, triggering new care recommendations (e.g. PT referrals) and deepening family trust.

WHAT IS ABLE ASSESS?

A clinical-grade falls-risk screening, built for non-medical settings.

In under five minutes, a caregiver uses a simple mobile app and a small hand-held sensor to capture four measurements that together predict fall risk with remarkable accuracy. The client sits, stands, walks a few steps, and squeezes the sensor. That's it.

THE FOUR ASSESSMENTS

01 Grip strength

A short squeeze on the hand-held sensor. Grip strength is a powerful proxy for overall muscle health and independence.

02 Leg strength

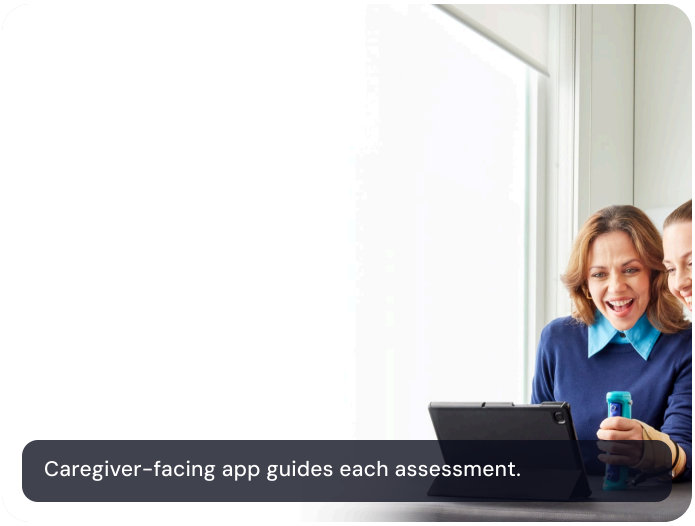
A seated sit-to-stand test measures the lower-body strength needed to rise from a chair, climb stairs, and recover from a stumble.

03 Gait speed

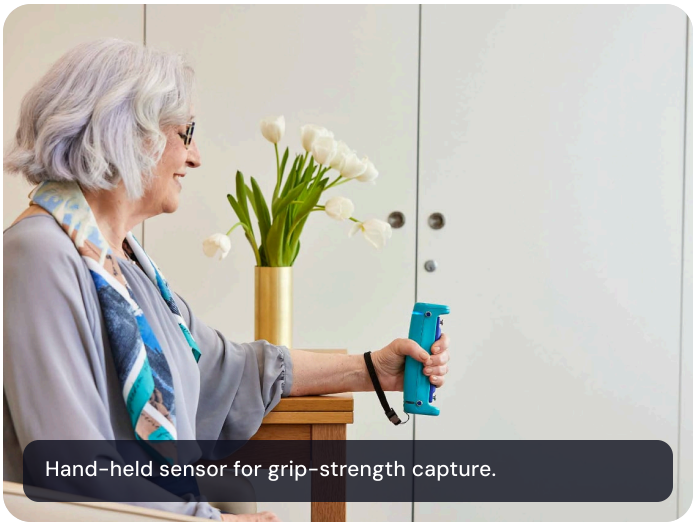
A short timed walk. Gait speed is one of the strongest single predictors of future falls and loss of independence.

04 Balance

A brief standing-balance task flags the instability that precedes most falls, long before a client or family would notice it.



Caregiver-facing app guides each assessment.



Hand-held sensor for grip-strength capture.

WHY ABLE ASSESS, NOT JUST ANOTHER APP

A device you can feel, a number you can trust.

Most fall-risk tools are phone apps that claim to measure gait from a pocket. For older adults and their families, that feels abstract. Able Assess is different — a physical device with real science and a real measurement. Clients squeeze it. They see their score. They feel the progress. That tangibility converts sceptics into believers, and prospects into clients.

REAL WORDS FROM THE FIELD

"The thing that really stands out about Able Assess is the physical device. There's science behind it, physicality behind it, a measurement behind it. That's a big differentiator for us. It's not just customer acquisition, it's retention. We should be doing this on every single open, establishing a baseline and checking back periodically."

Bob Roth
Owner, Cypress Home Care

How Cypress uses Able Assess: Bob's team is hosting falls-screening events at senior living communities as part of their marketing work.

"Having a defensible, tangible measurement changes the first-visit conversation entirely. Instead of selling care, we're showing the family something real about their parent's risk. It reframes the whole decision."

Jeff Welsh
Owner, Right at Home · Tri County Metro

How Right at Home uses Able Assess: Jeff's team is offering falls-risk screening during the first client interaction, to improve the number that opt for an initial assessment.

BUILT FOR THE REALITIES OF HOME CARE

Home care is hard. Able Assess is built for that reality — not to add to it.

Agencies juggle staffing crises, thin margins, and unsophisticated tech stacks. Able Assess is designed to drop into that reality and start earning its keep on day one.

01

Fast to deploy

No IT project. Caregivers are trained in minutes and can use it on the first client visit.

02

Non-medical safe

Fits cleanly inside a non-medical scope of practice while signalling clinical sophistication.

03

Family-friendly data

Shareable results give adult children peace of mind — a major driver of retention.

04

Integrates with your EMR*

Designed to port baseline and progress data into the systems you already use. **EMR integrations on roadmap; contact us for current status.*

THE BOTTOM LINE

One client pays for Able Assess many times over.

Every lost 24/7 client can cost an agency more than $100,000 in gross profit. Winning one new client, or holding onto one at risk of churn, pays for Able Assess many times over. The question isn't whether you can afford to add Able Assess. It's whether you can afford not to.

WHAT YOU GET WITH ABLE ASSESS

Everything you need to convert, retain, and stand out.

- **A hands-on demo tool** that opens doors at senior living communities and expos.
- **A clinical-grade baseline** for every new client, on day one.
- **A retention trigger** — periodic check-ins that surface decline early.
- **A brand story** that positions you as tech-forward and clinically aware.
- **A partner invested in your growth** — not just your licence fee.

READY TO CONVERT MORE PROSPECTS INTO CLIENTS?

Book a 20-minute demo and see the device in action.

A clinician who has run Able Assess in the field will walk through the workflow for your team, on your schedule.
